Toronto, Ontario | aaparedesp@outlook.com

SUMMARY

Full-stack software engineer shipping React, TypeScript, Node.js, and PostgreSQL features in production for a multi-tenant SaaS platform, and builder of Ninety, a live football prediction product with a Python modelling pipeline and daily automated deployments.

EDUCATION

Centennial College Scarborough, Ontario
Software Engineering Technician Diploma — GPA: 3.91/4.0

- Continuing education (in progress): CS50's Introduction to Artificial Intelligence with Python (Harvard/edX); AWS Certified AI Practitioner – Foundations course.

EXPERIENCE

Full Stack Developer Jul 2025 – Present
Twenitú Digital — Chicago, IL (Remote)

- Built responsive, accessible features for a multi-tenant SaaS platform using React, TypeScript, and Node.js/Express REST APIs integrated with backend services and PostgreSQL, shipping 20+ features from ticket to production.
- Built JWT-based authentication and role-based access control (RBAC) in Node.js to keep each tenant's data isolated and secure.
- Improved release stability by writing Jest tests before implementation (TDD), refactoring legacy modules behind regression tests, and reviewing teammates' pull requests.
- Improved production reliability on the on-call rotation by performing root-cause analysis, writing runbooks, and shipping fixes through Azure DevOps CI/CD to Azure App Service.
- Built Power BI dashboards tracking usage, revenue, and customer metrics, giving business stakeholders one place to monitor product performance.

PROJECTS

Ninety – Champions League Predictor | Python, PostgreSQL, Next.js, TypeScript, GitHub Actions | *Live Demo* | *GitHub*

- Built Elo and Poisson match-prediction models using Python (pandas, SciPy, scikit-learn) on 2,250+ matches, beating a uniform baseline by 14% on log loss in a walk-forward backtest of 753 unseen matches.
- Automated a daily GitHub Actions pipeline that ingests results, locks predictions before kick-off, runs a 10,000-season Monte Carlo simulation, and refreshes a Next.js site on Vercel through a read-only PostgreSQL role.
- Shipped an accessible, data-driven UI with Drizzle ORM and 100+ Vitest tests, scoring 100 on Lighthouse accessibility, best practices, and SEO.

TaskFlow | Next.js, TypeScript, Redux, Supabase, PostgreSQL | *Live Demo* | *GitHub*

- Built a real-time, multi-user task dashboard using Next.js, Redux, and Supabase Realtime subscriptions, syncing updates across users instantly.
- Secured each tenant's data using OAuth authentication and PostgreSQL row-level security policies.

CultureCompass | React, Node.js, MongoDB, SQL | *Live Demo* | *GitHub*

- Built REST/JSON APIs in Node.js consumed by a modular React frontend, backed by MongoDB and SQL data stores.
- Reduced read latency by ~50% on the highest-traffic routes by optimizing SQL queries and adding caching.

SkyPulse | React, Next.js, Tailwind CSS, REST APIs | *Live Demo* | *GitHub*

- Built a mobile-first weather app on a third-party REST API, with loading, error, and fallback states that keep it usable during API outages.
- Added geolocation and saved preferences so returning users see their local forecast without searching.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), Python, Java, SQL, HTML5, CSS3/SCSS.
Frameworks: React, Next.js, Node.js, Express.js, Redux, Tailwind CSS, pandas, NumPy, SciPy, scikit-learn.
Testing: Jest, React Testing Library, Vitest, Playwright, pytest.
Data: PostgreSQL, MongoDB, SQLAlchemy, Alembic, Drizzle ORM, Power BI.
Tools: Git, GitHub Actions, Docker, Azure DevOps (CI/CD), Azure App Service, Vercel, Supabase, Neon, Jira, Postman.
Concepts: RESTful APIs, JWT/OAuth/RBAC, test-driven development, CI/CD, accessible UI (WCAG), statistical modelling.
Spoken Languages: Spanish (fluent), English (fluent), French (intermediate).
