TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), Java, Python, SQL, C#.
Frontend: React, Next.js, Tailwind CSS, HTML5, CSS3, Component-based SPA Architecture.
Backend: Node.js, Express.js, REST APIs, Supabase, PostgreSQL, MongoDB, MySQL.
Tools: Git, GitHub, Postman, Vercel, CI/CD, Docker.
Practices: Agile/Scrum, Full SDLC, API Design, Unit Testing, Code Reviews, Performance Optimization.

EXPERIENCE

Twenitú Digital · Full-Stack Software Engineer – Chicago, Illinois (Remote) | Jul 2025 – Present

- Reduced API response times by ~15% by refactoring RESTful endpoint logic and optimizing data payloads across a Node.js + React stack; measurable improvement shipped within first sprint cycle.
- Owned 4 full stack features end-to-end (design to development to QA to deployment), cutting back-and-forth with the QA team by writing integration tests before handoff.
- Translated Figma designs into production React components with zero design-debt tickets logged, achieved through close collaboration with designers during sprint planning.
- Shipped sprint-aligned features across 8+ sprints in a cross-functional Agile team of engineers, designers, and stakeholders, maintaining a consistent on-time delivery rate.

PROJECTS

TaskFlow – Task Management Dashboard (Next.js, TypeScript, Tailwind CSS, Supabase, PostgreSQL)
Live Demo: taskflow-kappa-six.vercel.app/ **| GitHub:** github.com/aparedesp2003/Taskflow/

- Architected a multi-tenant data model using PostgreSQL Row Level Security policies, ensuring user-owned and shared project data is isolated at the database level - zero auth bypass vulnerabilities in post-launch audit.
- Built full authentication and protected routing with Supabase Auth, supporting email/password flows and persisted sessions - enabling 100% of app routes to require verified identity.
- Shipped real-time team collaboration features: project invitations, shared project views, and owner-only action guards - reducing the need for manual permission management.
- Delivered a pixel-perfect dark-mode UI with reusable component library, mobile sidebar navigation, and modal workflows - deployed to Vercel with 100/100 Lighthouse accessibility score.

CultureCompass Website (React, Node.js, MongoDB)
Live Demo: culturecompass-tau.vercel.app/ **|GitHub:** github.com/aparedesp2003/CultureCompass-Website

- Architected a Java backend around single-responsibility service modules, enabling each layer to be tested in isolation and extended without touching unrelated code.
- Redesigned MongoDB document schemas around query access patterns and added targeted indexes, eliminating full collection scans for the app's most frequently hit endpoints.
- Wired a React frontend to Node.js REST APIs with full async lifecycle coverage - loading states, error boundaries, and empty states - so every data fetch has a defined UI outcome.

SkyPulse – Weather Forecast Web App (React, Tailwind CSS, Vite, OpenWeather API, REST APIs)
Live Demo: weather-website-project-4hcx.vercel.app/ | **GitHub:** github.com/aparedesp2003/Weather-Website-Project/

- Achieved 99% uptime reliability during API outages by implementing layered error states, retry logic, and fallback UI - users receive graceful degradation instead of a broken screen.
- Built geolocation-first UX with persistent localStorage preferences, reducing the number of interactions required to get a forecast from 3 clicks to 0 on repeat visits.
- Deployed to Vercel with environment-scoped API key management and a CI/CD pipeline - 0 API key exposures in production.

EDUCATION

Software Engineering Technician Diploma – Centennial College | GPA: 4.09 / 4.5
